

## CLAIMS

1. A curable composition comprising (1) 0.1 to 20 parts by weight of a silicon compound having a silanol group or 5 a functional group capable of forming a silanol group upon hydrolysis and no radically polymerizable group, (2) 100 parts by weight of a radically polymerizable monomer and (3) 0.01 to 20 parts by weight of a photochromic compound, wherein the radically polymerizable monomer includes a 10 radically polymerizable monomer having an epoxy group in the molecule.
2. The curable composition according to claim 1, wherein the radically polymerizable monomer further includes a 15 radically polymerizable monomer having a silanol group or a group capable of forming a silanol group upon hydrolysis.
3. A coating which comprises the curable composition of claim 1 or 2.
- 20 4. An optical article having photochromism comprising a cured layer of the curable composition of claim 1 or 2 formed on at least one side of an optical substrate.
- 25 5. A photochromic cured product obtained by curing the curable composition of claim 1 or 2.
